1,500,000 trips in AmberGO system!

The popularity of the AmberGO system among users of some toll stations shows how desirable this solution was. Currently, there are over 194,000 vehicles registered in the system. At the end of January, average daily transactions in the AmberGO system reached almost 17%. The leader in payments in the AmberGO system is SPO Stanisławie, where traffic in the AmberGO system reaches 31%. Plazas in Swaróżyn and Pelplin handle 21% and 23% respectively of transactions in the AmberGO system.

The AmberGO system, due to its uniqueness and innovative approach to handling electronic payments, will be constantly developed. At the beginning, payment for the journey in the system was only possible using the Autopay application also available through the Bank Millennium application, but at the end of December the system expanded its payment options with another application - SkyCash.

The first half of the year is also a period of improving the operation of the AmberGO system so that it is the most optimal for the user and so over the past months, the Operator has significantly minimized the emerging problems with incorrect reading of the registration plates. Currently, the AmberGO system in over 98% correctly reads the registration numbers of vehicles entering and leaving the AmberOne A1 Motorway. This is a great result for such systems.

Another improvement for users is the additional marking of gates dedicated exclusively to AmberGO payments. Bearing in mind the behavior of drivers who do not comply with the content of signs placed on the canopies of toll plazas to limit the possibility of incorrect entry into the lane dedicated only to AmberGO payments, we have introduced additional illuminated boards informing that the lane the car is moving on is dedicated only to electronic payments. The boards bear the inscription "Tylko AmberGO / Only AmberGO". These boards are installed early enough for the driver who mistakenly are entering the dedicated lane to have time to change lane without any problem and without blocking. The introduction of additional marking along with the ongoing education of users will help avoid situations in which the driver realizes too late that he has found himself on the lane dedicated to AmberGO payments.

What are our plans for the future? The AmberGO system will be further developed, we will gradually introduce more electronic payment providers and fleet cards. In addition, along with

the growing popularity of the AmberGO system, new gates dedicated solely to electronic payments will be introduced on the main plazas. The option of paying in the AmberGO system on all AmberOne A1 motorway gates, including collector's gates, will remain unchanged.

AmberGO has a chance to affect the flow of traffic at the gates and help unload congestion during the holiday season. However, the number of active users of the AmberGO system will determine its effectiveness. The necessary minimum to feel the effects of the system is 30-40% of active AmberGO users. Registration in the AmberGO system pays off even if we use the motorway once a year, especially during the holiday season. Then it comes to the largest accumulation in traffic and then AmberGO can help, as it increases the throughput of the gate three times.

We strive to make the system available for every type of daily, occasional driver or driver traveling by AmberOne on business. We hope that thanks to the combination of a modern solution provided by the AmberGO automatic payment system and the involvement of users, we will be able to unload the bottlenecks.

All information on AmberGO with instructions for use can be found at www.a1.com.pl.
AmberGO and you're driving!
