AmberGO on all gates even before the summer holiday!

Over the last year, we were working on the pilot version of the AmberGO system. Thanks to cooperation with the Ministry of Infrastructure, GDDKiA, the A1 AmberOne Motorway Operator (Intertoll Polska), and the Blue Media company, supplier of the Autopay application, we have managed to perfect the system so that can meet the drivers' most stringent requirements. The AmberGO is the pay collection system based on automatic recognition of the registration plaques and all it requires comes down to one-off installation of a mobile application.

The AmberGO system, including all its functionalities, has been operable on all gates and toll plazas of the A1 AmberOne Motorway. Alert to the feedback from the AmberGO system users, we have put up appropriate signage at all gates to facilitate the use of the system. In addition, each main lane plaza has a gate dedicated solely to active users of the AmberGO system. Such gates have signage with AmberGO and crossed toll collector symbol, which means that there will not be possible to pay in traditional way i.e. cash/card.

We are satisfied with the effect of our joint work, and we are putting at the users' disposal a modern, functional, and well working system which gives us all a chance of decongesting the traffic queues forming at the motorway gates in the peak traffic period, i.e. the summer holidays.

The next stage consists in engagement on the users' side and their active use of the AmberGO system. We deliver the system, but its functioning in the proper scale depends on the users. The more AmberGO system users, the shorter will the queuing at the gates be. The estimated gate capacity in the AmberGO system is 3 times higher than their capacity in the traditional system. The heretofore maximum capacity of an exit gate stands at 200 vehicles and hour, while with the AmberGO system in place it can go up to as many as 600 veh./h.

The AmberGO system will continue to be expanded, i.e. as far as possible, new payment method suppliers will be included in the system, to name e.g. operators of electronic payments, operators of fleet cards, etc.

We trust that thanks to the combination of the modern solution, i.e. the AmberGO automatic payment system, and users' commitment, we can manage to ease traffic congestion at the gates.
