

## Press Release

Data / Date:  
13/12/2021

### **AmberGO - a modern proven system that improves the passage through motorway gates.**

The gates on the AmberOne A1 Motorway ensure enforcement of the toll collection system, changing only their character to automatic as the number of payment users in the AmberGO system increases.

Furthermore, mixed gates, i.e. those that also support traditional payments, allow users of the A1 Motorway who do not know or do not want to register in modern automatic payment systems to pay tolls using traditional forms of payment with no need to change the route in search of ticket sales points. In our opinion, this is a user-friendly solution. Invariably, due to the fact that the passage through the gates using the AmberGO system is 3 times faster than using traditional forms of payment, we encourage drivers to use the AmberGO system. Such solutions are the future and a way to relieve congestion at the gates.

At the end of November, 32% of transactions on the AmberOne A1 Motorway were carried out using the AmberGO automatic payment system. And more than 815,350 vehicles are registered in the system. Traffic analyses clearly indicate that transactions in the AmberGO system are 3 times faster than traditional payments. And the system itself, with the growing interest of users, has a chance to relieve congestion at motorway gates also during periods of increased traffic. It all depends on the number of active users.

We would like to remind you that registration in the AmberGO system is extremely intuitive. It requires only a few pieces of information, such as: basic user data, vehicle registration number and payment card details or, in case of using banking applications, indicate the account from which payments are to be taken. After registering in the system, the user does not have to have the application on, what is more, he does not even have to have a phone with him.

Currently, you can join the system by downloading our AmberOne application, using other payment applications such as Autopay, iKO or Skycash or by selecting bank applications of Bank Millennium, EnveloBank, PeoPay, Alior Mobile, Moje ING,

Santander Bank, SGB Mobile, or by connecting LOTOS and ORLEN fleet cards in the system.

We are constantly working on the expansion of the AmberGO system, which is why GTC presented the National Tax Administration a convenient solution enabling e-Toll users to travel AmberOne A1 Motorway using the AmberGO system.

AmberGO and you are going it is so easy!
